

Sophisticated data, simply delivered

Support your website with powerful data tools

It's important to keep the information displayed on your websites, marketing collateral, internal documents and other public facing material up to date. FE Precision+ Datafeeds offers you solid, high quality data with flexible, customisable data outputs delivered in the way you want them. The datafeeds can be built in two ways: configurable or custom.

Configurable

Build your own web applications

Through the use of a configuration system, we construct the key data components required to enable you to develop your web application using our reliable, trusted and accurate data.

- Puts the control of the application build and user experience in your hands
- No need to maintain a database of your own
- The flexibility to call different chunks of data in different formats and at different times
- Easy retrieval of data
- Standardised formats allows easy interpretation of data
- Different delivery formats (XML, JSON, CSV) for added flexibility

Custom

Charts, widgets and applications built for you

Developed via our configuration system, we provide pre-packaged charting and widget components to populate straight onto your web application reducing the development resource on your side.

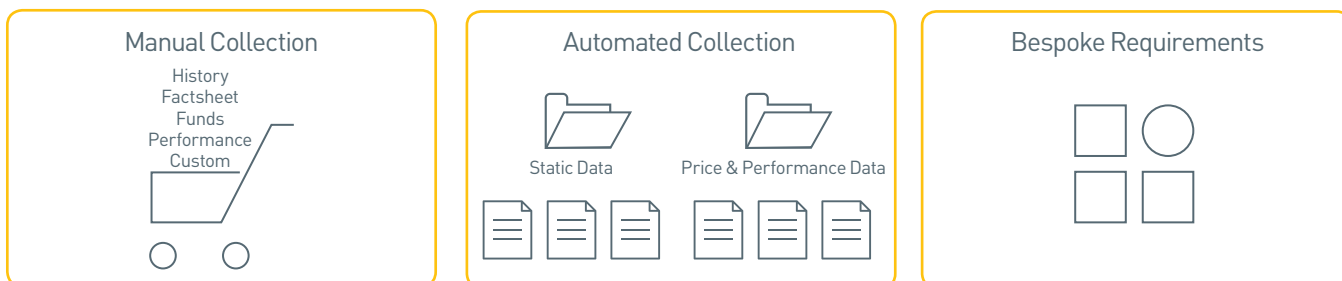

- Incorporates the latest technologies and features including animation and responsiveness
- Removes product testing and maintenance responsibilities from you
- Built to seamlessly integrate with your website's design
- Multiple outputs including JPEG and PNG

Configuring your datafeed

The FE Precision+ Datafeeds process has been designed to keep things simple. We are able to receive data in most formats to feed into our database. It can then be configured to your data specifications and delivered through a customised API or feed. Whether you choose to build tools yourself or have them tailor made by FE the output will contain the highest quality data available today.

1) Collect data in line with your requirements

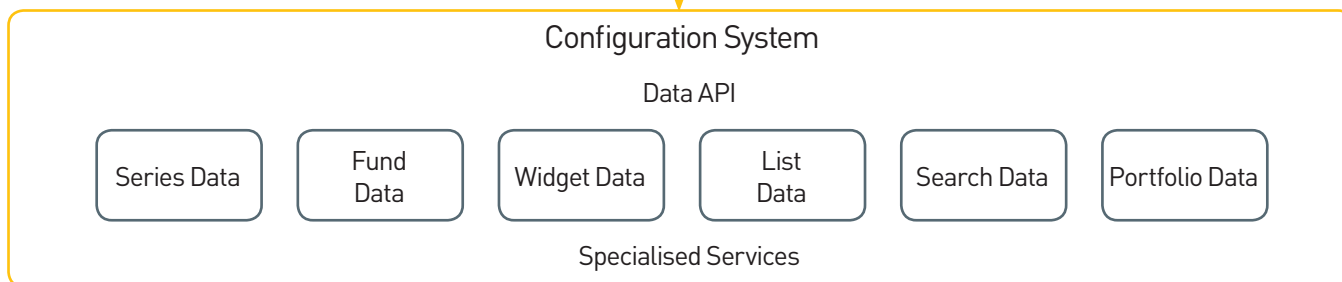

Market leading coverage

Our extensive database of funds and the wide range of data points on these funds means that we have the coverage required for almost every scenario you can think of.

Reliability for your peace of mind

We operate a highly resilient, dual-live technology environment that adheres to ISO standards for data management. This ensures our feeds are always available when they are needed.

2) Configure data the way you want to receive it

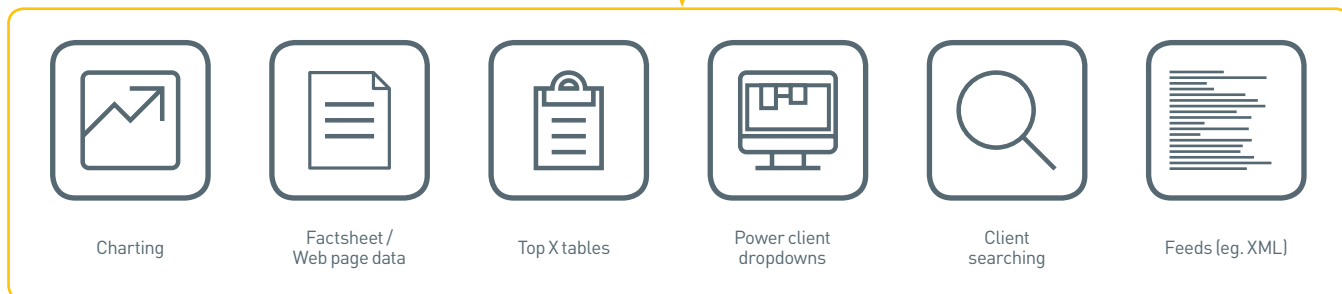

Revolutionary configuration tool

Datafeeds can now be set up in record time using our configuration tool. This means, faster delivery, continuous product updates, quick change request turnarounds and on-going product testing to ensure your feed is working as hard as your business is.

Data how you want it

Our range of data feed services provides you with access to the data you want, when you want it, and in the way you want it. We cater for all needs from simple price feeds for valuations to highly complex bespoke solutions.

3) Delivered in an output to suit your needs

Delivered on your time

Our feeds are structured to be delivered at a time that suits you best. Constantly updating, our databases can deliver feeds on demand or on a rolling basis throughout the day.

Flexibility to suit your needs

Our feeds can be customised in terms of format, frequency, fields of data and data granularity, fund and instrument universe delivery mechanism and more.
